## WHY WE CHOSE SOLANA?

Launching a cryptocurrency on Solana offers unique advantages over other blockchains, such as:

### 1. High Speed and Scalability:

Solana is quick, and can handle up to 65,000 transactions per second (TPS).

This ensures scalability and enables the network to support a growing user base. Other popular chains such as Ethereum only support 15-30 TPS

### 3. User Friendly:

Solana offers smooth and fast transactions, which is critical for user retention in apps, games,

and other interactive platforms, which will play a vital role in the MemeTorrent ecosystem!

### 2. Low Transaction Costs:

Solana's transaction fees are consistently low, typically just a fraction of a cent!

This makes it cost-effective for users, especially compared to networks like Ethereum, which can have extremely high transaction fees costing hundreds of dollars.

### 4. Development friendly:

Solana offers easy-to-use dev tools and has a growing ecosystem of accessible resources, making development smooth for new and experienced teams.

With this in mind, future MemeTorrent projects launched by the community will be much simpler to execute.
